PROJECTS

Freelance Developer	*Private Repo*	Current

- Designing a fully responsive website for a client's pool management company.
- Implemented one-click application form for potential employees.
- Secure online payment through the incorporation of Stripe.js
- Created wireframes to convey new website design to client and exceed expectations.

World of Flags	Github, Live	Jan 2019

- Developed schema for backend server of geographical quiz application.
- Incorporated B-Crypt in order to encrypt tokens and keep user information private.
- Utilized Nightmare.JS to scrape data from Jeopardy API and construct hints for the application.
- Finished backend server ahead of schedule and joined frontend team to help knockout issues including implementing login page through React and Redux-Thunks.

Next-Flix	Github, Live	Dec 2018

- Recreated Netflix's beautiful UI using only the MovieDB API.
- Incorporated IFrame in order to play movie trailers on mouse hover and provide random background trailer to encapsulate the feel of Netflix's website.
- Designed and hosted backed to store user login information as well as favorite movies.

Get Educated On Education	Github	Nov 2018

- Was given a target audience (Elementary school teachers) and an API (ProPublica API) and told to create an app that would solve a problem pertaining to the API and audience given.
- Developed an application that would target a user's geo-location and display the Congress and Senate for that state.
- Allowed user to compare Congressmen based on an education parameter and display how they voted on subsequent bills.
- Achieved 95%+ test coverage.

EDUCATION

Denver, CO	Turing School of Software and Design	Jun 2018 – January 2019
